

ZOOMSCOPE™
with Trulight

NEW
Introducing Trulight
a brighter, whiter, cool LED
light for ZoomScope.
Never change a
light bulb again during
a procedure.

I love the new ZoomScope with Trulight which has a superior, brighter cool LED light source, a great advantage when performing colposcopy. There is never a bulb to change during a procedure. Together with superior optics and ease of focusing, Trulight offers a winning combination. There is no other colposcope that even comes close!

Ruth Steinberg, M.D.
New York City

Wallach's premier colposcope offers unobstructed access. Continuous zoom optics makes it the all purpose choice.

ZoomScope's unique overhead suspension system allows for optimal viewing of the examination site. Quality stereoscopic Nikon optics offer the utmost in flexibility and precision. Optional foot pedal frees both hands for positioning instruments and completing the procedure without disturbing the patient. The colposcope easily converts to an operating microscope to simplify office procedures. Now available with Trulight or the original standard transformerless halogen fiber optic light.

ZoomStar™

ZoomStar offers the same quality optics and features as the standard ZoomScope on a compact center post for the budget and space conscious.
